PROFILE

Backend-focused Software Engineer with 7+ years of experience building production platforms, distributed services, real-time systems, and partner integrations. Experienced with Go, Node.js/NestJS, gRPC, NATS JetStream, PostgreSQL, Redis, AWS, Docker, and Kubernetes, with end-to-end ownership across integration, implementation, testing, deployment, and production troubleshooting. Comfortable collaborating in English with Product Managers and cross-country engineering teams.

EXPERIENCE

Cypherlab Sdn. Bhd.

Feb 2026 – Aug 2026

Senior Full-Stack Engineer

Real-time sports and e-sports betting backoffice platform

Tech Stack: Go, gRPC, NATS JetStream, WebSocket, PostgreSQL, Redis, ClickHouse, Docker, Kubernetes

- Contributed to the greenfield rebuild of **Backoffice V2**, restructuring the legacy system into a domain-oriented modular BFF in Go and integrating sports-manager HTTP APIs with order-book, wallet, and user-service via gRPC.
- Built a real-time event pipeline using **NATS JetStream** → **in-memory projections** → **WebSocket**, handling event ordering and stale updates to maintain consistent market and odds state for operator dashboards.
- Separated API serving, ClickHouse ingestion, and settlement processing into independent **statically linked Go binaries** deployed as Kubernetes workloads using a shared distroless Docker image, isolating synchronous API traffic from asynchronous workloads.
- Implemented a shared **Command Gate** for high-risk operator actions, centralizing operation reasons, idempotency, maker-checker validation, and audit trails for consistent and traceable workflows.

Mediconcen

Feb 2022 – Jan 2026

Senior Full-Stack Engineer

Hong Kong-based InsurTech delivering digital health insurance solutions

Tech Stack: TypeScript, NestJS, Go, PostgreSQL, Redis, AWS, Docker, Kubernetes

- Owned end-to-end backend integrations for clinic and insurer partners, covering **eligibility verification, copayment calculation, claims processing, and third-party insurer APIs** from requirement clarification through production support.
- Moved legacy PHP services to **NestJS** while separating frontend and backend, keeping both sides on TypeScript; introduced ORM data access and DTO validation.
- Introduced **Redis caching** for frequently accessed data, reducing repeated database reads and query load on backend services.
- Migrated **AWS ECS workloads to Kubernetes**, replacing per-service deployment scripts with a shared release process to keep environments consistent; accepted added cluster maintenance.
- Troubleshoot production issues across backend services, databases, and third-party APIs, collaborating with Product Managers and cross-country engineering teams to identify root causes and deliver fixes.

Paradromix

Jul 2021 – Feb 2022

Frontend Engineer

Government-grade crypto management systems and enterprise web platforms

Tech Stack: TypeScript, Vue, Nuxt (SSR), AWS, Nginx, Docker

- Led frontend delivery for SSR web platforms and built a custom CMS for non-technical teams, with focus on maintainable architecture and production deployment.

ULIC TEK

Jan 2018 – Jul 2021

Software Engineer

Image processing systems and industrial desktop-web hybrid solutions

Tech Stack: Vue, TypeScript, Angular, C++, MFC, OpenCV

- Built image-processing functionality in C++/OpenCV and modernized legacy desktop applications with web-based UI layers.

TECHNICAL SKILLS

Backend: Go, Node.js, NestJS, gRPC, REST APIs, WebSocket, NATS JetStream

Data: PostgreSQL, MySQL, Redis, ClickHouse, MongoDB

Cloud & Architecture: AWS, Docker, Kubernetes, Microservices, Event-Driven Architecture, CI/CD, Linux, Nginx

Frontend & Tools: React, Vue, Next.js, Nuxt, TypeScript, Git, Jira, Postman | English, Mandarin

EDUCATION

Bachelor of Chemistry, Chia Nan University of Pharmacy and Science

Graduated 2017
